## **Project Design Phase-II Customer Journey Map**

Date	10 November 2022
Team ID	PNT2022TMID25119
Project Name	Natural Disasters Intensity Analysis And Classification Using Artificial Intelligence
Maximum Marks	4 Marks

## **CUSTOMER JOURNEY MAP**

\*

## Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

As you add steps to the experience, move each these. Thise Est the left or right depending on the scenario you are documenting.

				dependin you are d	g on the scenario occumenting.
Natural disasters intensity analysis and classification using Al	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) typically experience?	Users become aware of the Al model through advertisements and social media social m	Video frames captured for the intensity analysis the disasters	Classifies the natural disaster and talk at talk of the disaster of disaster.  Characteristics and disaster of dis	Determination of ten nature and to alert people if disaster in predicted disaster is predicted	Establishing liek Implementing with government and organizations for Mitigation Accusting Systems
Interactions What interactions do they have at each step along the way?  = People: Who do they see or talk to?  = Places: Where are they?  = Things: What digital touchpoints or physical objects would they use?	Interaction with people who are familiar with product	Use of hardware on screen interfaces to communicate technical experts	Interaction with scientists and disaster analysers Interaction with videocan for continuus monitoring	Communicate their feedback to service providers  Contact the helpline in case of disaster detection	Interaction with the government agencies to taking appropriate for taking appropriate functions
Goals & motivations At each step, what is a person's primary goal or motivation?  ("Help me" or "Help me avoid")	Simple user friendly ITo gain knowledge in the field of natural diseaser classification	To make full use of the functionality of the model	Improved response time  Accurate prediction	Examining the numbers of letalities, injuries	Ensuring better service to customers improvisation based on feedback provided
Positive moments  What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Motivated to save human and property disaster classification	Delightful user possibility of a continuous self- teaming model using bt.	Designing light weight Web Application of model	Periodic forecasting Without interruption Ensuring Robust Operation across terrains and crimates	Examining the financial damage acaused limplementing Helpline, Avarences and Threshold Actuating Systems
Negative moments What sleps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Time consuming Complexity of algorithms	Fear of losing data  Costly hardware and software components	Collection of large set of data is time consuming Frustation due to long duration of training of model	Failure due to technical issues  Anger due to some error in resuts	Examining the false triggering and correcting it
Areas of opportunity How might we make each step better? What Ideas do we have? What have others suggested?	Increased brand loyalty  Advertising the model to public	Betterment of accuracy in prediction Retrieval of Training and testing data	Designing light weight Web Application amber of data	Optimizing the AI Model with respect to real world environment	Maximizing the uptine of the Web App Service  Examining the false triggering and correcting it
